MAGNETIC RESONANCE IMAGING OF THE RIGHT KNEE

TECHNIQUE: Multiplanar, multisequential MRI was performed in the recumbent position on a high-field 1.5 Tesla magnet.

HISTORY: Patient complains of right knee pain with clicking and swelling.

INTERPRETATION: Posterior cruciate ligament is intact. Anterior cruciate ligament demonstrates mucoid change with interstitial ganglia and periligamentous edema.

Medial collateral ligament is intact. Lateral complex is intact. Popliteus is intact with no muscle tear.

Medial meniscus is intact. Cartilage over the medial joint is preserved.

Lateral meniscus is intact. Cartilage softening over the central tibia.

Patellar cartilage is intact.

Patellar tendon is intact. Quadriceps is intact. Patella alta. Infrapatellar soft tissue edema with minimal scarring of the prefemoral fat.

No popliteal cyst. No muscle tear. Hamstring and gastrocnemius tendons are intact.

No fracture. No contusion.

IMPRESSION:

- Patella alta with no discrete cartilage defect.
- Infrapatellar soft tissue edema, which can be seen with patellofemoral impingement syndrome.

- No meniscal tear or fracture.

Thank you for referring your patient to us for evaluation.

Sincerely,

A handwritten signature in black ink, appearing to read "Mark J. Decker", with a stylized flourish at the end.
